Cursor Prompts and Responses – Evidence/Proof of Cursor AI Use

Generating plan.md, readme.md, requirements.txt, and refinements-changes.md

Documentation files for Unity project

Please use the word document in the project folder to generate a plan.md (development plan with milestones, AI Tools, task list), readme.md (overview, installation/run instructions, credits, and note on AI tools used), equirements.txt (list of dependencies, libraries, or plugins) and a refinements-changes.md (running log - maintained by Cursor - showing scope shifts and
design decisions.). These files must be updated when changes/refinements are made. The game is gonna be made in Unity using C# and so far ChatGPT, Grok and Cursor are the AI tools that have been used. Also add a file that provides step-by-step instructions of how to implement the C# scripts generated in Unity

Agent Auto

I'll locate the Word document in your project first, extract its key project details, and then generate all requested markdown/text files tailored for a Unity C# workflow with the AI tools you listed.

Explored 3 searches, 1 command

Searched files **/*.docx in ST10435229_GADS7331_POE_Part 1

Searched files **/*.doc in ST10435229_GADS7331_POE_Part 1

Searched files **/* in ST10435229_GADS7331_POE_Part 1

Ran ls

I found the Word file in the root folder. Next I'm extracting its text so I can base the planning and documentation files directly on it.

Read attempted

Extract readable text from Word document python

I've extracted the concept details from the Word document and I'm now creating the five project files with Unity-specific milestones, setup instructions, dependencies, and a refinement log template that can be updated as the project evolves.

plan.md +96

```
# Development Plan - Catch That Beat!

## Project Goal
Build a first-person Unity (C#) audio chase game where the player tracks and catches a mischievous housel
```

README.md +57

```
# Catch That Beat! - Unity Project

## Overview
**Catch That Beat!** is a first-person 3D audio chase game set in a cozy modern apartment.
A mischievous household droid steals the player's AirPods and moves around the apartment while leaking s
```

equirements.txt +36

```
# Catch That Beat! - Dependencies / Libraries / Plugins

Engine:
- Unity Editor (LTS recommended)
- Unity Hub
```

refinements-changes.md +43

```
# Refinements and Changes Log

This running log is maintained in Cursor to track scope shifts, design decisions, and implementation ref
```

```
## Change Log
```

unity-script-implementation-guide.md +88

```
# Unity C# Script Implementation Guide

This guide explains how to add and configure generated C# scripts in Unity for **Catch That Beat!**.

## 1) Create Script Folders
```

Explored 1 command

Created all requested files from the Word concept document, tailored for a Unity C# project and including the AI tools you specified (ChatGPT, Grok, Cursor).

Files added

- `plan.md`
  - Development plan with milestones, AI tools section, risks, and task checklist.
- `README.md`
  - Project overview, setup/run instructions, credits, and AI usage note.
- `equirements.txt`
  - Dependencies/libraries/plugins list (kept your requested filename exactly).
- `refinements-changes.md`
  - Running change log with initial entries plus a reusable decision-record template.
- `unity-script-implementation-guide.md`

Maintaining and updating files

Here is an update for the document(s). I used the AI tool Producer AI to generated the music tracks for the game.

I'll update the project documentation to include `Producer AI` as an additional AI tool used for music generation, and log that refinement in the change log.

Explored 4 files

plan.md +1

```
- **Cursor:** Coding support, script generation, and documentation maintenance
- **Producer AI:** Music track generation for gameplay atmosphere and chase pacing
```

README.md +2 -1

```
- Producer AI (music track generation)
 6 unchanged lines
- Project concept and implementation: Student developer
- AI support tools: ChatGPT, Grok, Cursor
- AI support tools: ChatGPT, Grok, Cursor, Producer AI
```

equirements.txt +1

```
- Cursor
- Producer AI (music generation)
```

refinements-changes.md +2

```
  - Implemented a modular architecture (player, AI, game-state, UI, audio) to simplify testing and iterat
- AI usage refinement:
  - Added Producer AI as a confirmed tool for generating the game's music tracks.
```

Updated all relevant docs to include your new AI tool usage.

Changes made

12 Files Undo All Keep All Review

Changes made

- `plan.md`
  - Added `Producer AI` under **AI Tools Used** with note: music track generation.
- `README.md`
  - Added `Producer AI (music track generation)` in **AI Tools Used**.
  - Updated **Credits** to include Producer AI.
- `equirements.txt`
  - Added `Producer AI (music generation)` under AI tools in workflow.
- `refinements-changes.md`
  - Logged this as an **AI usage refinement**: Producer AI added for game music tracks.

If you want, I can also add a short "AI Disclosure" section in `README.md` with dates and purpose per tool (useful for assignment submissions).

Maintaining and updating files – Implementing AI Ethics Statement in readme.md

Hi! Please use my word document ST10435229_GADS7331_POE_Part 1_AI Ethics Statement and include an AI Ethics Statement in the readme.md summarising compliance with originality and fair use throughout this project.

Agent Auto

Extracting document text 5s

I'll locate the Word "AI Ethics Statement" document in your project folder, extract its text, then insert a clean "AI Ethics Statement" section into `README.md` (and log the documentation refinement in `refinements-changes.md`).

Explored 2 searches, 1 command

Found the AI Ethics Statement Word file. Next I'll extract its text content, then update `README.md` with an "AI Ethics Statement" section that summarises originality and fair use, based on that document.

Maintaining and updating files – Implementing Reflection in plan.md and readme.md

Documentation files for Unity project

Hi! Please use my word document ST10435229_GADS7331_POE_Part 1_Reflection Prompts and include short reflections (about 200 words each) at the end of the plan.md and readme.md files. Use the content I provided in my document.

Agent Auto

Planning reflection text creation 7s

I'll first locate your Word file `ST10435229_GADS7331_POE_Part 1_Reflection Prompts`, extract the reflection text/prompts from it, then append two ~200-word reflections (one at the end of `plan.md`, one at the end of `README.md`). Finally, I'll log the documentation update in `refinements-changes.md`.

Explored 1 command

Extract reflection prompts text from docx python

I've extracted the reflection prompts and the notes you provided (AI strengths/limits, how AI changed your process, and ethical considerations). Next I'll append two ~200-word reflection sections—one to `plan.md` and one to `README.md`—using that exact content, and then log the documentation update in `refinements-changes.md`.

Explored 3 files

I've found the exact reflection notes in your Word document ("Reflection Prompts Notes"). Next I'll append two short reflections (~200 words each) to the end of `plan.md` and `README.md`, and I'll add one more entry to `refinements-changes.md` to log this documentation update.
