Date: 27 March 2026

Evidence of Human-AI Collaboration

Place of Contribution	AI Contribution	Human Contribution	AI Tool Used	Link to Human Prompt and AI Response
Evidence of Human-AI Collaboration Document	*[None]*	• Created document and content present in document	*[None]*	*[N/A]*
Project Plan-Asset Tracker Spread Sheet	*[None]*	• Created document and content present in document	*[None]*	*[N/A]*
High Concept Document	Generated content.	• Made adjustments and refinements to content to align with idea/vision of game (e.g. changed wording) • Made adjustments to structure of content – how content is presented in document. • Made content more academic report-like by removing personal pronouns, e.g. “you”, “your”, etc. • Added introduction • Added conclusion using content from generated content.	Grok	Hi! Please generate a one page High Concept Document outlining the title, genre, core loop, visual style, and intended experience of the a 3D first person game called "Catch That Beat!". The setting of the game is in the player character's home and the player character is looking for their AirPods. They found that their little household robot/droid is in possession of the AirPods and playing music. The player must catch the little droid and retrieve the AirPods, but the little droid is cheeky and dashes away each time. To locate the droid, the player must listen for the music playing from the AirPods.
High Concept Document Cover Page	Generated image	• Used Krita to adjust the human character’s expression in the generated image	ChatGPT	• Hi! Please generate a game cover, A4, for my game titled "Catch That Beat!". The visuals must be cute, 3D low-poly, and cozy. The

				setting is in a modern apartment with a cute, small droid with wheels, possessing AirPods and playing music. The little droid is being chased by a human. The atmosphere is fun and playful, but not too cute.
plan.md, readme.md, requirements.txt, and refinements-changes.md	Generated content	• Provided the High Concept Document of the game. • Adjusted equipments.txt file (added "…for GitHub commits" and removed "-Cinemachine (optional camera polish)"). • Adjusted plan.md file (changed "household droid" to "social droid"). • Adjusted readme.md file (changed "household droid" to "social droid"). • Indicating when changes are made and requesting the relevant files be updated accordingly • Provided own content for the short reflections at the end of *plan.md* and *readme.md* • Provided own content for the AI	Cursor	• Please use the word document in the project folder to generate a plan.md (development plan with milestones, AI Tools, task list), readme.md (overview, installation/run instructions, credits, and note on AI tools used), equirements.txt (list of dependencies, libraries, or plugins) and a refinements-changes.md (running log - maintained by Cursor - showing scope shifts and design decisions.). These files must be updated when changes/refinements are made. The game is gonna be made in Unity using C# and so far ChatGPT, Grok and Cursor are

		Ethics Statement in the *readme.md*		the AI tools that have been used. Also add a file that provides step-by-step instructions of how to implement the C# scripts generated in Unity
C# Scripts	Generated C# Scripts for Unity: PlayerControllerFPS.cs, roidAIController.cs, RoundManager.cs, CatchDetector.cs, AudioTrackerFeedback.cs, and GameUIController.cs.	• Refined Player-ControllerFPS.cs. Made changes to player input system, mouse sensitivity and camera height. • Refined AudioTracker-Feedback.cs. Removed pitch change to music when nearing the player • Updated UIManger Script to use Text Mesh Pro in Unity	Cursor	• Please create the C# scripts for this game and save it in the folder ST10435229_GADS7331_Poe_Part 1
unity-script-implementation-guide.md	Generated and updated content	• Asked to update content to provide clearer instruction as to where the scripts must be attached/placed in the Unity scene. • Asked to included comments with each line of code for user understanding	Cursor	• Update (remember to track refinements made), in the unity-script-implementation-guide.md please indicate where each script must be attached too. also provide comments, no more than 12 words, for each line of code
In-Game Music for Droid Character	Generated three instrumental tracks for game character	• Provided guidance for the feel and atmosphere the track must create	Producer AI	Please generate an upbeat, fun, high-energy instrumental track • Funky brass version

		to suit the playful, fun theme		• Make it faster • Better! Now lets make another track. Make a pop track. Use catchy beats, excited energy, and cool bass. • Lets make another track. Make it pop with cool drops. And make it a bit quirky and fun
Main Menu, Win & Lose Condition Music	Generated instrumental track for Main Menu and Win Screen	• Provided guidance for the feel and atmosphere the track must create to suit scene/screen	Producer AI	• Please generate a vibrant, upbeat, fun instrumental track for the main menu of a playful chase game • a bit less upbeat please
Setting up GitHub repository and Git LFS for Unity Project	*[None]*	• Created New Repository on GitHub and Initialised Git LFS	*[None]*	*[N/A]*
Trip The Droid 3D Character Model	Generated 3D Character Model	• Provided image of character, used character from High Concept Doc cover page image • Used Krita to remove background (make transparent background)	Tripo 3D	• No prompt • Just uploaded image of character
3D Environment	*[None]*	• Purchased on Unity Asset Store	*[None]*	*[N/A]*

Main Menu Background	Generated image	• Provided High Concept Document Cover Page image for consistency	ChatPGT	• Please use this image to generate a horizontal image of the same style with the same characters
UI button images	Generated images	• Provided High Concept Document Cover Page image for consistency • Provided guidance for UI visuals	ChatGPT	• Please use the same style in the provided image to generate UI images of a Play button, Quite button, Controls/Info button, Resume button and Pause button. • Make the UI less cute. • Perfect! Keep the UI exactly as is, just remove the background. Make the background transparent.
Add dynamic movement to UI Buttons	Generate script for UI button movement – UIButtonWanderer.cs	• Implemented it in Unity scene and tested • Adjusted UI setup to accommodate behaviour of script	Cursor	• Can you create a script that i can attach to each UI button that will allow the button to move around? It must not be too fast and must be random. there are gonna be three buttons. Remeber to update the documents for this refinement/change.

Play Guide/Info	Generated content	• Provided High Concept Document for context • Adjusted content for simplicity	ChatGPT	• Please generate a short play guide in bullet point form based on the content in the following high game concept document • Make the instructions shorter please
Character Model Orientation in Unity Script	Generated Script	• Explained orientation issue of 3D Model • Created Script in Unity • Selected and implemented AI-provided code • Adjusted script to suit Unity setup	Grok	• Hi Grok! Please generate a c# script that helps re-orientate my 3d model character in unity. At runtime, the character rotates 90 degrees anti-clockwise, making it appear on its side. Please generate a script that ensure the character says right-side up.
CharacterController Script	Generated Unity Script	• Provided instruction for how the player controls. • WASD for movement, Space bar for jump, Tab to allow cursor click, Shift for sprint • Suggested solution for player-droid interaction for E-Key	Grok	• can you help me generate a PlayerController C# script for a first person pov game in unity. The player will use the WASD keys for movement (use if(Input,GetKey("W")) method). hold in SHIFT is for sprint and space is for jump. Tab is to pause the game and bring up the pause menu panel and click E is to grab the droid when close

				enough to the droid.
Droid controller script	Generated Unity Script	• Provided instruction for how the droid must behave • Provided script that needed to be debugged/corrected	Grok	• Great! Now lets focus on the droid. The droid has a nav mesh agent on it an successfully navigates between different roam points on the map. However, its supposed to race away from the player when the player is near, and it must do so randomly. At the moment the droid seems to ignore the player in their near and continue its route. Can you help fix this? Here is the script:
Win/Lose State Images	Generated Images	• Provided High Concept Document Cover Image for consistency • Removed backgrounds in Krita and exported Win and Game Over Title	ChatGPT	• Please use this image to generate a horizontal image of a win image and a game over image using the same style with the same characters
MainMenu and CountDown Script	*[None]*	• Coded MainMenu and CountDown Script	*[None]*	*[N/A]*
Additional UI Buttons – Main Menu, Retry, Back Button	Generated Images	• Provided image of previous UI Buttons for consistency • Guided final image, requested that background be removed –	ChatGPT	• Hi! Please generate the ui buttons Main Menu, Retry, Resume, and Back using the exact style as the

		transparent background		UI buttons in the provided image. • Please remove the background. The image should have a transparent background
Game Manager	Generated Script	*[None]*	Grok	• Yay! Its working! Now lets refine the rounds in the game. The player must catch the droid three times for them to win. Each round has a different track of music the droid plays, and also the time for the countdown is less in each round. For the current round (the first round) the time is 1min30sec, the second round its gonna be 1min, the third round is gonna be 30sec. if the player managed to catch the droid in all three rounds they win (call win state scene) otherwise they lose (call lose state scene). How are we gonna do this without changing too much of our current set up?
Pause Panel UI	Generated image	• Provided image from High Concept Doc Cover Page for consistency	ChatGPT	• Please generate an image of a UI Panel using the same style as the above images

Debugging Scripts	Debugged Scripts and explained issue	• Explained Issue • Provided issue scripts	Grok	*[See Grok Collaborative Sessions]*
