1 Introduction

The following document provides a high concept overview of the game *Catch That Beat!,* outlining the game's story, setting, core loop, win/lose condition, visual style, and intended experience.

2 High Game Concept: *Catch That Beat!*

Catch That Beat! is a first-person audio chase, cozy domestic adventure game where the player's cheeky little household droid, *Trip*, has stolen their AirPods and is throwing an impromptu game of chase around the household. The player's mission is to hunt down the little droid using their ears and quick reflexes before it slips away again in this light-hearted, sound-driven 3D chase.

2.1 Setting

The game takes place in a single, fully explorable modern apartment, featuring a living room, kitchen, bedroom, hallways, study, and bathroom, viewed in a first-person perspective. Each room presents everyday clutter like couches, plants, shelves, chairs, magazines, TV, etc., to create natural obstacles for the player to navigate around and for the droid to use as cover or shields. The time of day is set to be a golden-hour afternoon, creating a warm and inviting atmosphere.

2.2 Core Loop

1. **Listen:** Directional 3D audio from the AirPods leaks through walls and around corners/objects. Music gets louder and more spatial as the player get closer.
2. **Navigate:** Move freely in first-person, peek around furniture, crouch under tables, open doors, and check the rooms.
3. **Spot & Sprint:** Catch a glimpse of the droid and rush to catch it.
4. **The Dash:** The droid reacts with a cheeky animation, like a spin, before bolting to try and lose the player. The music continues to play.
5. **Repeat:** The difficulty of each chase escalates slightly as the amount of time given to the player has to find and catch the droid becomes less, making each round more challenging and chaotic.

2.3 Win/Lose Condition

For the player to win, they must catch the droid three times in a row. Each round has a countdown timer that resets after each catch. If the player is unable to catch the droid before the countdown reaches zero, then the game ends and the droid wins.

2.4 Visual Style

Catch That Beat! has a stylized 3D visual style with a vibrant, low poly, cozy aesthetic. To emphasise the warm and inviting atmosphere, a warm colour palette – like soft oranges, teals, and wood tones – will be used along with playful particle effects on the droid, like musical notes, and minimalistic UI.

2.5 Intended Experience

The game is designed to evoke joyful, playful frustration. Players feel like they're hunting a mischievous pet in their own home, making the experience fun and comical. The tone of the game is cheeky, wholesome and with zero violence. The droid is not "bad", just mischievous and playful. and finds amusement in having something the player wants, the AirPods.

3 Conclusion

In conclusion, *Catch That Beat!* is for anyone who enjoys music, fast-paced chase games, and a bit of mischief. The game delivers big personality in a small, cozy package and turns the player's real-world ears into the primary controller, making it short, replayable, unique and endlessly charming. Perfect for a quick play session that leaves players smiling.

Evidence of AI usage:

- AI Prompt: Hi! Please generate a game cover, A4, for my game titled "Catch That Beat!". The visuals must be cute, 3D low-poly, and cozy. The setting is in a modern apartment with a cute, small droid with wheels, possessing AirPods and playing music. The little droid is being chased by a human. The atmosphere is fun and playful, but not too cute.

AI Prompt: Hi! Please generate a one page High Concept Document outlining the title, genre, core loop, visual style, and intended experience of the a 3D first person game called "Catch That Beat!". The setting of the game is in the player character's home and the player character is looking for their AirPods. They found that their little household robot/droid is in possession of the AirPods and playing music. The player must catch the little droid and retrieve the AirPods, but the little droid is cheeky and dashes away each time. To locate the droid, the player must listen for the music playing from the Airpods.

HIGH CONCEPT DOCUMENT

Catch That Beat!

One-Page Pitch

TITLE

Catch That Beat!

GENRE

First-Person Audio Chase / Cozy Domestic Adventure

HIGH CONCEPT (Logline)

In your own messy home, your cheeky little household droid has stolen your AirPods and is throwing an impromptu dance party. Hunt it down using nothing but your ears and quick reflexes before it slips away again in this light-hearted, sound-driven 3D chase.

SETTING

A single, fully explorable modern apartment (living room, kitchen, bedroom, hallway, bathroom) viewed in first-person. Everyday clutter—couches, plants, shelves, laundry piles—creates natural obstacles and hiding spots. Time of day is golden-hour afternoon, warm and inviting.

CORE LOOP (30–45 second cycles)

1. **Listen** – Directional 3D audio from the AirPods leaks through walls and around corners. Music gets louder and more spatial as you get closer.

2. **Navigate** – Move freely in first-person, peek around furniture, crouch under tables, open doors.

3. **Spot & Sprint** – Catch a glimpse of the droid (glowing earbuds dangling from its head). Rush to grab it.

4. **The Dash** – The droid reacts with a cheeky animation (tongue out, spins, does a tiny victory dance), then bolts to a new random hiding spot while the music briefly cuts out, then resumes.

5. **Repeat** – Each chase escalates slightly: music tempo increases, droid gets faster, new obstacles appear (closing doors, moving chairs).

Win Condition

Catch the droid three times in a row (it gets "tired" after the third successful grab). Short campaign (5–8 minutes) + endless mode for high scores.

VISUAL STYLE

Stylized 3D with a vibrant, cartoon-cozy aesthetic (think *Astro Bot* meets *Untitled Goose Game*).

- Clean lines, soft lighting, exaggerated droid proportions (big expressive eyes, bouncy antenna).

- Warm color palette: soft oranges, teals, and wood tones.

- Playful particle effects when the droid dashes (sparkles, musical notes, tiny speaker cones).

- UI is minimal and diegetic—music visualizer pulses on screen when you're close.

INTENDED EXPERIENCE

Pure joyful frustration.

Players feel like they're actually hunting a mischievous pet in their own living room. The game is built around **immersive 3D audio**—headphones strongly recommended—so you close your eyes, tilt your head, and literally follow the beat.

- **Tone**: Cheeky, wholesome, zero violence. The droid is never "bad"—it just wants to party.

- **Target Audience**: Casual players, families, rhythm-game fans, anyone who's ever lost their AirPods.

- **Unique Selling Point**: Gameplay that turns your real-world ears into the primary controller. Short, replayable, and endlessly charming.

- **Monetization / Post-Launch**: Free base game + cosmetic droid skins, new apartment layouts, and custom music packs.

Tagline

"He's got your beats... and he's not giving them back."

One-Page Summary

A bite-sized, audio-first chase game that turns losing your AirPods into the most fun you've ever had at home. Catch That Beat! delivers big personality in a small, cozy package—perfect for a quick play session that leaves you smiling every single time.
